

TRAINING

AS COMMERCIAL VEHICLE MECHATRONICS ENGINEER

Do you have a passion for cars and want to put this to the test? Then the workshop at SOVEREIGN'S subsidiary company, ACTIV CARS, near Bremen, is just the right place for you.

During your training as a commercial vehicle mechatronics engineer, you will inspect our vehicles for errors and faults and at the same time work with the latest measuring and test equipment. As a logistics company, we rely on the trouble-free and on time transportation of any goods. Regular inspections are therefore extremely important for ensuring safe transport.

During your training, you will learn tasks such as the assembly, dismantling, servicing and maintenance of the respective vehicles and their installed units and systems. This responsible training requires physical endurance and an interest in mechanics and electronics. There will not be a single day in which you will be unable to expand your knowledge.

MIN. EDUCATIONAL REQUIREMENTS: Hauptschulabschluss (secondary school leaving certificate) or mittlere Reife (GCSE equivalent)

TRAINING DURATION: 3.5 years

VOCATIONAL SCHOOL: Berufsbildende Schule Verden (Location: Verden near Bremen)

Please send your detailed application (cover letter, CV with photo, references) by email only to Andrea Gorr (HR) and Cornelia Jeske (HR): hr@sovereignspeed.com

Markus K., 19, first year of training as commercial vehicle mechatronics engineer, ACTIV CARS, Achim

'It was always my childhood dream to tighten bolts on vehicles. The working atmosphere at SOVEREIGN is perfect. The workshop is really big, but very well arranged, and a certain level of orderliness prevails, which I like.'
